Information Management System

We intend to build an Information Management and Statistical System for the ILLIAC IV. It is intended to support various areas of research whose problems are ILLIAC IV suited and whose data bases are large.

This System will include a user language and necessary manipulatory routines for the ILLIAC IV. It will use the datacomputer for Archival storage and provide the interface to the datacomputer for queries not ILLIAC suited.

If you have problems involving large amounts of data and wish to learn more about our proposed system or contribute to its development, contact:
