## Host Ports
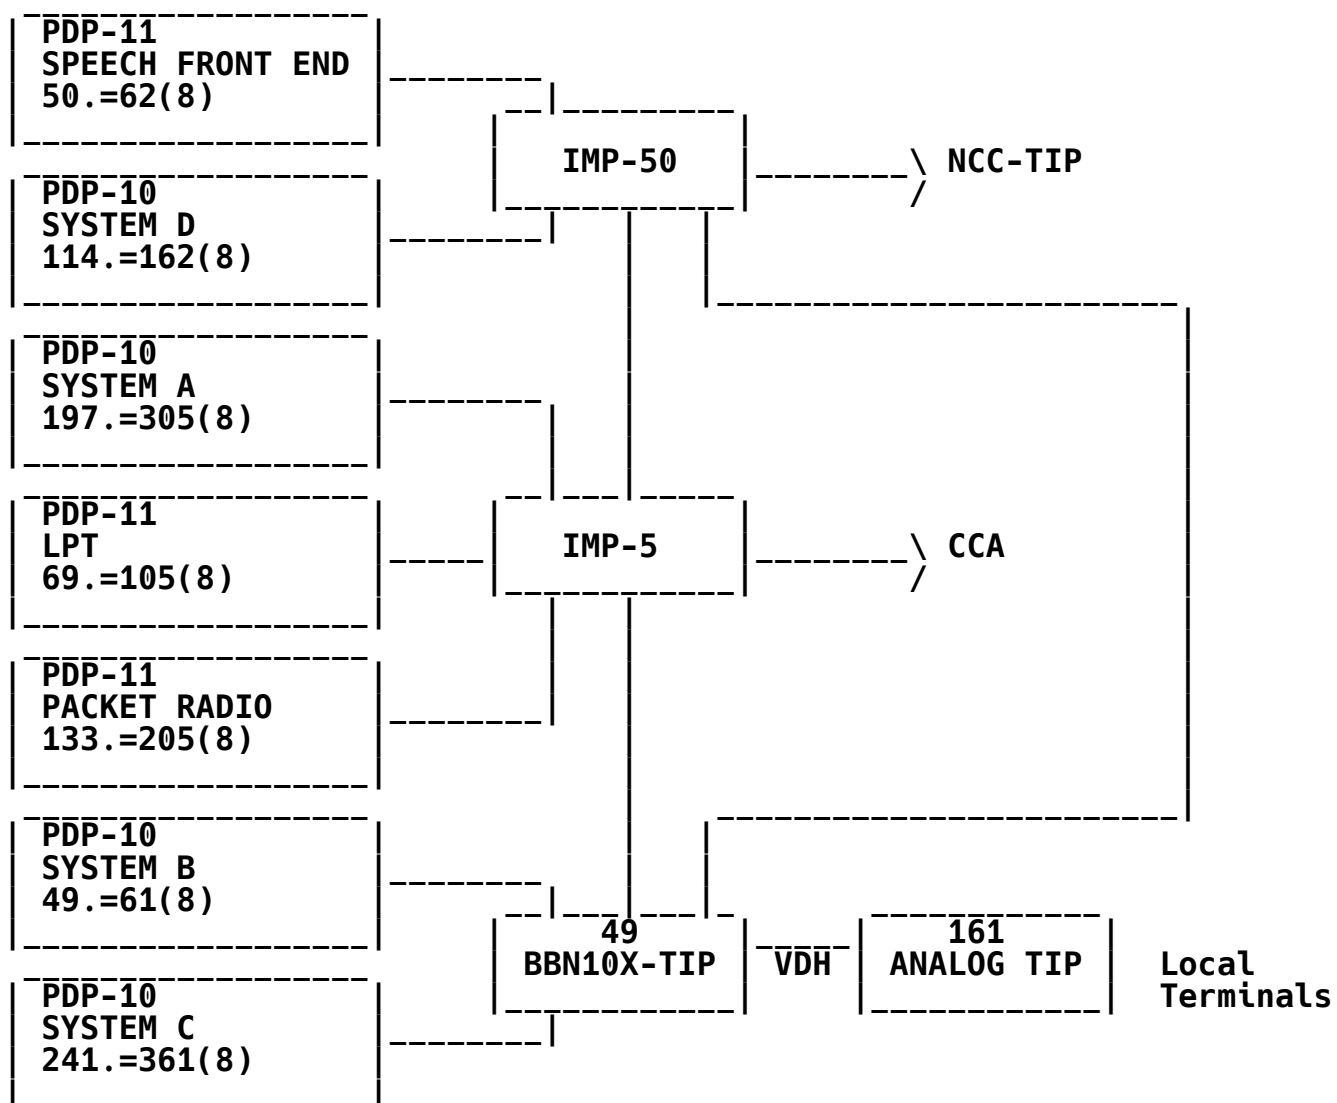

The following is the approved scheme to connect our computers to the
network.  This configuration will become effective December 18, 1974.

```
 _____
| PDP-11                 |
| SPEECH FRONT END        |_____
| 50.=62(8)              |         |
|_____|       __|_____

```

   All host interfaces are local (except host number 005 which is an
   easily convertible local/distant interface and we have been asked by
   Div 6 to avoid using it so Div 6 can more easily check out PDP-10 IMP
   interfaces).  The PDP-11 with the line printer is intentionally on
   host 105 so that a simple minded program can respond when someone
   tries to ICP to its logger socket "To login to BBN (System C) use
   host number 241(10)".

               [ This RFC was put into machine readable form for entry ]
               [ into the online RFC archives by Alex McKenzie with    ]
               [ support from GTE, formerly BBN Corp.          2/2000 ]
